Period fo	The MAILING DATE of this communicat or Reply	ion appears on th	e cover sheet with the c	orrespondence ad	ldress				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).									
Status									
1)⊠	1) Responsive to communication(s) filed on 23 May 2007.

Art Unit: 2626

DETAILED ACTION

Allowable Subject Matter

- 1. Claims 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 2. The following is a statement of reasons for the indication of allowable subject matter:

 The prior art of record Nguyen et al. (6,901,364) show that it is well known to identify languages and transmit them from to a server. In regard to claim 6, the prior art of record do not show or suggest that the language identification information can be model or serial numbers of a peripheral device connected to the information terminal device.

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-4 and 9-16 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 1 is drawn to an algorithm, per se, or program performing such or medium resulting from such. Claims to processes that do nothing more than solve mathematical problems or manipulate abstract ideas or concepts are non-statutory. If the "acts" of a claimed process manipulate only numbers, abstract concepts or ideas, or signals representing any of the foregoing, the acts are not being applied to appropriate subject matter. Schrader, 22 F.3d at 294-95,30 USPQZd at 1458-59. Thus, a process consisting solely of mathematical operations without some claimed practical application is drawn to non-statutory

Art Unit: 2626

subject matter. In this case, the claims merely recite "transmitting the address information to the server", without specifically outputting anything to a user (visually or audibly).

The features of the invention that would render the claimed subject matter statutory if recited in the claim is to include data input to the system and how it is measured and converted to the desired data. This would place the claims into a so-called "safe harbor" by requiring a physical act outside a computer (the physical input of speech and subsequent change of physical attributes thereof).

Another option would be to add limitations that indicate the practical use of the resultant data in an overall system.

For the claimed process to be statutory, the claim must either: (A) result in a physical transformation <u>outside</u> the computer for which a practical application is either disclosed in the specification or would have been known to a skilled artisan (pre-computer or post-computer process activity), or (B) be limited to a practical application.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1,5, and 11-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Nguyen et al. (6,901,364).

In regard to claims 1 and 11-12, Nguyen et al. show in Figure 4, an information terminal code means and device comprising: an acquisition unit acquiring language identification information concerning a language used on a display screen (item 54); a storage unit storing

address information of a server (item 56); a language identification information synthesizer synthesizing the language identification information into the address information; and a transmitter transmitting the address information to the server (items 54-56).

Page 4

In regard to claim 5, Nguyen et al. show in Figure 4, an information terminal device, comprising: an input unit inputting a user's voice (item 60); a use language recognizer recognizing a use language based on the user's voice (item 60); a storage unit storing address information of a server (item 56); an acquisition unit acquiring language identification information concerning a use language recognized by the use recognition means (language models); a language identification information synthesizer reading address information from the storage unit and automatically synthesizing the language identification information with the address information (item 54), when the language identification information is acquired; and a transmitter transmitting the address information to a server (items 54-56).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Susan McFadden whose telephone number is 571-272-7621. The examiner can normally be reached on Monday-Friday, 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richemond Dorvil can be reached on 571-272-7602. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
